Service Technician Instruction ST – 033 29. November 2005

Limit value for knock monitoring system type 3 version C

The default parameters regarding knock limit KLS 90 for type 3 version C are changed from 4.5 mA to 5 mA. This adaption is founded on design changes of the cylinder head.

Because of a possible interference a minimum distance of 3 cm between the high voltage cable of the ignition system with o-coil and cable of the knocking sensor is necessary.

The modification is based on the research and development report 04/927.
